

Food Safety and Inspection Service Washington, D. C. 20250

MAY 0 4 2012

Dear Ms. Evenson:

Thank you for your e-mail of April 25, 2012, to the Department of Agriculture (USDA), regarding your concerns about horse slaughter. The Food Safety and Inspection Service (FSIS) has been asked to provide you with a response, and I appreciate the opportunity to address your concerns.

FSIS is the public health regulatory agency in USDA responsible for ensuring that meat, poultry, and processed egg products are safe, wholesome, and accurately labeled. FSIS enforces the Federal Meat Inspection Act (FMIA), the Poultry Products Inspection Act, and the Egg Products Inspection Act, which require Federal inspection and regulation of meat, poultry, and processed egg products prepared for distribution in commerce for use as human food.

FSIS also is responsible for enforcing the Humane Methods of Slaughter Act (HMSA), which requires that all livestock at federally inspected establishments be handled and slaughtered in a humane way. Humane methods of handling and slaughtering livestock prevent needless suffering of animals and result in safer and better working conditions for employees in slaughter establishments. Transportation of livestock is under the jurisdiction of USDA's Animal and Plant Health Inspection Service (APHIS). Information about the APHIS Slaughter Horse Transport Program is available on their Web site at www.aphis.usda.gov/animal_health/animal_dis_spec/horses/horse_transport.shtml.

As you may know, Congress prohibited the use of funds for inspection of horses for human food with the passage of the Fiscal Year (FY) 2006 Appropriations Act. However, in November 2011, when Congress passed the FY 2012 Consolidated and Further Continuing Appropriations Act (H.R. 2112), there was no language that denied USDA funding for the inspection of horses for human consumption. As mandated by the FMIA, FSIS is, therefore, responsible for the inspection of horses for slaughter.

Before any establishment receives a grant of inspection to slaughter horses, FSIS will verify that the establishment is in compliance with all federal requirements. FSIS will also address the environmental effects of horse slaughter operations. However, FSIS will require additional time to prepare to resume its inspection regimen for horses after such a long gap in performing horse inspections. One reason is the lack of a verification method to determine whether horsemeat is free of animal drug residues that would compromise food safety. FSIS is in the process of validating our new

residue testing methods for horsemeat, and we are not able to approve applications from any establishment wishing to slaughter and process horses until we have the science to enable us to apply the USDA mark of inspection appropriately. We expect that work will take a number of months.

Also, FSIS inspection staff assigned to horse slaughter facilities will have to undergo "refresher" training, as they have not performed inspection responsibilities tailored to equine establishments for some time, if at all. Additionally, all potential horse slaughter and processing facilities will have to undergo thorough review under the FMIA and the regulations that implement it. These facilities will need to develop plans to ensure sanitary conditions and to ensure that any food safety hazards are controlled. In addition, they will need to determine how they will comply with the HMSA and with any applicable State requirements. This work will take time also.

Selling and eating horsemeat is legal in most of the United States, as long as the meat is labeled clearly, and the horses are slaughtered at federally inspected establishments. At this time, FSIS has not issued a grant of federal inspection to any establishment for horse slaughter.

For more information on food safety, please visit the FSIS Web site at http://www.fsis.usda.gov.

Thank you again for writing.

Sincerely

Daniel L. Engeljohn, Ph.D.

Assistant Administrator

Office of Policy and Program Development

Protecting public health by preventing food borne illnesses is FSIS' top priority.

Help protect your family. Check Your Steps at http://www.foodsafety.gov/keep/
