## NARRATIVE

Inspection by Drs. Sylvia Taylor and Denise Sofranko of USDA/APHIS/AC, accompanied by Head Animal Trainer Graham Chipperfield. Exit review conducted with Dr. Gary West.

Facility was in compliance with minimum standards under the AWA.

### Issues Discussed:

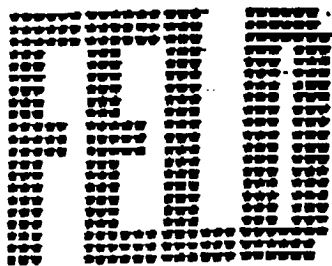

- Medical Records
- Elephant TB testing protocol
- Elephant skin care
- Written diet plans and diet regimens for felines
- Cooling opportunities for felines

**NARRATIVE**

No non-compliances identified this inspection.

**Comment:**

I talked to Dr. Wm Lindsay, their veterinarian . about the elephants that are limping. Several animals have had arthritis for many years(at least 12). Lechamee ( 32 yrs). Sofle( 28yrs), Mini (42 yrs). The animals have warmed out so medication has not been given. If the condition was more pronounced, medication and retirement would happen if necessary.

Tb records on human personel: I was refused actual names of employees but see their results. I was referred to their corporate offices, since this is confidential medical information.

Standard ankas( or smaller ones) are used on the elephants, no electric prods are used.

The dogs have the old license numbers(new license # in April). Regional office should be contacted if they want to continue using the old tags.

**Inventory:**

- Code: 14 Farm animals 6 alpacas, 2 Scottish highland cattle, 1 nubian goat= 9
- Code 16 Exotic Cats 12
- Code 05 Dogs 8
- Code 18: elephants 15

Complaint

### NARRATIVE

Inspected 15 elephants.

No non-compliance identified this inspection.

Note 1: Three of the elephants display lameness when moved about during inspection. These include Lechamee (32 yrs old), Sophie (29 yrs old), and Minnie (43 yrs old). Both Lechamee and Sophie were observed with lameness in the right foreleg, and Minnie moved with an abnormal gait. The animals had been standing in their enclosures when observed, but facility representatives stated the elephants will warm out of the lameness with exercise. Satisfactory foot care was noted. The elephant, Susan, had two small lacerations present on her forehead. Officials stated this injury was caused by another elephant a few days ago. Medication is being applied and the injury appears to be resolving well.

Note 2: The attending veterinarian is aware of the lameness noted the animals above, as documented in the 9/11/98 inspection report. Upon review, the veterinary medical records annotate a chronic lameness of the right foreleg in Lechamee and Sophie dated 5/23/98, and an abnormal gait in Minnie dated 9/2/98. The animals have not been placed on medication at this time.

Note 3: In reference to §2.125, Information as to Business, the licensee is requested to have documentation included in the animals' individual medical records as follows: the information would specifically indicate that (1) these animals have been evaluated for lameness and (2) a statement that the animals are either receiving treatment or do not require treatment for the condition. This information will be incorporated into the records by 10/21/98.

Inspector was accompanied by Elizabeth Kelpis, Senior Investigator, IES and Assistant Operations Manager, Todd Sites.

## NARRATIVE

Inventory: 15 Elephants

The information requested by "Note 3" on the 10-7-98 inspection(Denver, CO.), under 9CFR 2.125, has been added to the records.

This is a partial inspection, limited to the elephants, generated by complaints from the Performing Animal Welfare Society. The train was in Miami and therefore not seen. The trucks were also not seen this inspection.

No non-compliances identified this inspection.

Exit interview was discussed with the attending veterinarian, Dr. Lindsay, and it was agreed to send this report to him by certified mail. Copy will also be sent to Mr. J. Steele; General Mgr. Blue Unit.

## NARRATIVE

Inventory: 2 Camels 3 Alpacas 2 Goats 11 Elephants

**CATEGORY II: Non-compliant item(s) previously identified for which time remains for correction.**

### Section 3.125(a) Structural Strength

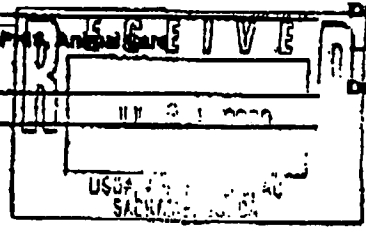

**D** ~~Animals travelling~~ with circus are the property of, and under the control of, Josip Marcan, 58 C 0270. The transport enclosure, and the train used as the transport vehicle, are the property of and under the control of Ringling. ~~The transport enclosure has a structural flaw in a roof vent that resulted in high temperatures and loud noises during transport from Phoenix to Las Vegas.~~ Correction Date was given as 7-12-00, but circus unit had not yet seen inspection report. Temporary repair has been made to roof vent. Permanent, secure repair is necessary to avoid further injury to animals. To be corrected by: 7-16-00 (Next scheduled use of transport vehicle is 7-16-00).

**CATEGORY III: Non-compliant item(s) identified this inspection**

### Section 3.140 Care in transit

~~During surface transport, animals must be visually observed at least every 4 hours. Hoolock and elephants ride in manned cars. Tiger transport vehicle is inaccessible as long as train is in motion. It is not clear if the minimum 4 hour time frame is being observed. Documentation of such observations is not available. Circus and Animal managers stated that discussions regarding modification of tiger transport vehicle are in progress. To be corrected by: 7-28-00. If necessary, a plan addressing permanent correction and a time frame for completion can be submitted by that time, as well as how temporary~~

# INSPECTION REPORT

License / Registration #: 52 C 0137

July 12, 2000

correction will be accomplished.

### Section 3.139(a) Water

-Animals are to be provided water every 12 hours during transport. Again, it is not clear if the opportunity to water the tiger every 12 hours is available, (due to the transport design and train movement). To be corrected by: 7-28-00. If necessary, a plan addressing permanent correction and a time frame for completion can be submitted by that time, as well as how temporary correction will be accomplished.

### Section 3.138(a) Primary Conveyance

-Tiger transport design has allowed excessively high temperatures during routine transport, per records maintained by tiger owner. Vent failure pushed these temperatures to a point of immediate danger to the animals (see previous inspection). To be corrected by: 7-28-00. If necessary, a plan addressing permanent correction and a time frame for completion can be submitted by that time, as well as how temporary correction can be accomplished.

End of report.

## NARRATIVE

Elephants-10, Camels-2,

**CATEGORY III: Non-compliant item(s) identified this inspection:**

### Section 2.40 Veterinary Care

There is no documentation maintained on elephants that have minor lesions, scars or abrasions. Careful examination of the elephants revealed some scratches or lesions that may have required medical care, but there is no documentation of treatments. Procedures of treatments were described by the animal handlers but no documented records were maintained. Records of medical treatment were not available on the camel that recently had both rear feet caught in a train track. The procedures for treatment of this animal was described by the veterinarian and the animal handler. It is a requirement to document and have available records of treatment for animals requiring veterinary care. Programs must be established for documentation of treatments for any lesion/scar of any type that requires veterinary care. These programs must be established for all animals under your control. Correct by September 14, 2000.

### Section 3.125(c) Storage

Perishable items were seen in a trailer near toxic substances. Breads and Carrots were in plastic bags and were stored in a trailer with a can of spray paint, gas operated pressure washer and several discarded drink containers. Bananas were in two boxes beneath a trailer on the asphalt

Inspection  
Type: ROUTINE INSPECTION  
Date: DEC-19-2001

I inspected 12 Asian elephants, 4 alpacas, 3 zebras, 2 camels, 2 goats, and 2 Galloway cattle at the Blue Unit 2001/02 winter quarters at the Florida State Fairgrounds in Tampa, FL. I also inspected 9 tigers with the show, which are under contract and handled under their owner's separate USDA license.

The facilities complied with all applicable regulations and standards.

Due to time constraints, and by mutual arrangement, I agreed to fax this report to the licensee, after an exit interview with Deborah Fahrenbruck, Veterinary Technician and Behaviourist.

Inspection  
Type: ROUTINE INSPECTION  
Date: MAY-24-2006

**2.40 (b)(2)**

**ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).**

Section 2.40(b)(2) Veterinary care: Each exhibitor shall establish and maintain programs of adequate veterinary care that include the use of appropriate methods to prevent, control, diagnose, and treat diseases and injuries, and the availability of emergency, weekend, and holiday care.

The elephant named Jewell has an abnormal gait and walks with a stiff left front leg. There were no records available initially during this inspection regarding this condition including an assessment by the attending veterinarian. During the inspection the attending veterinarian sent documentation that she examined Jewell last week and determined that she was normal, no lameness was observed. Additionally the veterinarian stated that any stiffness on the left front leg disappeared within a few minutes of walking around and requires no treatment. During this inspection Jewell was observed walking in a line with the other seven elephants for about seven minutes. The stiffness in the left front leg did not disappear as she walked.

Jewell's current condition needs to be addressed by the attending veterinarian to ensure the animal's health and well-being. Correct by May 31, 2006.

This inspection was conducted at the Giant Center in Hershey, PA.

Animal inventory: 2 alpacas, 2 Angora goats, 2 Zedonks and 8 elephants: Jewell, Juliette, Kelly, Bonnie, Sara, Minyak, Karen and Nichole.

**2.131 ( b ) ( 1 )**

**HANDLING OF ANIMALS.**

Sec. 2.131 Handling of animals.

(b)(1) During public exhibition, any animal must be handled so there is minimal risk of harm to the animal and to the public, with sufficient distance and/or barriers between the animal and the general viewing public so as to assure the safety of animals and the public.

Between approximately 0830 and 0900 hours on July 11, 2006 the Ringling Bros. train carrying eight Asian elephants was parked on the railroad tracks near the intersection of Ventura Street and Santa Fe Avenue in Fresno, California with insufficient barriers between the animals and the public. Shortly after arriving at this location at 0830 hours three APHIS personnel who were waiting for the train were able to approach and walk unchallenged directly to the open doors of the elephant cars. Additionally, we observed an individual who later identified himself as a local newspaper photographer lean into the open doors of several cars containing elephants in order to take photographs. The only Ringling Bros. personnel observed during this time was one individual who was cleaning in one of the elephant cars. This person did instruct us to move away from the door when we approached that car. He also leaned out and asked us to step away several minutes later. By that time the person who identified himself as a photographer was observed to lean inside most of the elephant cars with his camera. Additionally, at least one local television station had broadcast a story the previous evening stating that the animal walk from the train would begin at 0900 hours, so by the time the additional personnel arrived numerous cars had parked on the road (Santa Fe Ave.) next to the tracks and people were lining up to watch. There was a chain link fence between Santa Fe Ave. and the tracks; however the train was easily accessed by walking around the fence, as had the APHIS personnel and photographer.

The lack of an adequate perimeter fence, or other appropriate alternative security measure in this instance, failed to ensure that there was sufficient distance and/or barriers between the animals and the general viewing public so as to assure the safety of both the animals and the public. Under these circumstances a member of the public would have been able to enter the cars and approach the animals, thus jeopardizing their own safety, or place items inside the cars that could adversely affect the well-being of the animals. A system should be in place to ensure that appropriate security is provided when the train containing animals is stopped on the railroad tracks.

Correct by July 13, 2006.

Note:  
The purpose of this inspection was to evaluate the elephants travelling with the Blue Unit.

Non-compliant item(s) identified this inspection; IV. Non-compliant item(s) previously identified that have not been corrected

The above inspection was performed in response to a complaint that an elephant had a black, injured or infected toenail on its left front foot. An elephant named "Meena" had an injured toenail on the front left foot earlier this year. The nail has been treated by the attending veterinarian. It does not appear to be infected, with no heat, swelling or discharge apparent on examination. There is still a defect in the toenail which is gradually coming out. The nail is being treated with topical application of gentian violet as a precaution against infection. The elephant was not lame when walked around its yard, and when turning in a tight circle. There were no abnormalities found on inspection of this, or any of the other elephants.

Non-compliant item(s) identified this inspection; IV. Non-compliant item(s) previously identified that have not been corrected:

Category IV  
48 Veterinary Care 2.40  
According to the medical records reviewed, the elephants have not had their tetanus vaccinations in the past year, and have not been dewormed (or had fecal exams) as per the program of Veterinary care.  
The PVC states that all elephants will have yearly tetanus vaccinations, and will be dewormed (or <sup>have</sup> fecal exams) six times a year.

CONTINUATION SHEET FOR ANIMAL CARE INSPECTION REPORT (S)  
(APHIS FORMS 7004 and 7008)

1. LICENSE OR REGISTRANT AND NUMBER <i>Kingling Bros. + Barnum + Bailey Circus</i>	2. LIC. OR REG. NO. <i>58-C106</i>	3. DATE <i>9/13/96</i>	4. PAGE <i>2 OF 2</i>
5. LOCATION OR SITE <i>Key Arena, Seattle, OR</i>		6. WAYBILL NUMBER AND DATE (If Applicable)	

ARRATIVE: I. Non-compliant item(s) previously identified that have been corrected; II. Non-compliant item(s) previously identified for which time remains for correction; III. Non-compliant item(s) identified this inspection; IV. Non-compliant item(s) previously identified that have not been corrected:

The above inspection was performed in response to a complaint that an elephant had a black, injured or infected toenail on its left front foot. An elephant named "Meena" had an injured toenail on the front left foot earlier this year. The nail has been treated by the attending veterinarian. It does not appear to be infected, with no heat, swelling or discharge apparent on examination. There is still a defect in the toenail which is gradually growing out. The nail is being treated with a topical application of gentian violet as a precaution against infection. The elephant was not lame when walked around its yard, and when turning in a tight circle. There were no sores or ulcers found on inspection of this, or any of the other elephants.

### NARRATIVE

CATEGORY III: Non-compliant item(s) identified this inspection.

Section 2.50 (c)(1)(i)- All exhibitors shall identify all live dogs under his or her control or on his or her premises with an official USDA sequentially numbered tag. The eight poodles that are present are only identified with tattoos. In addition to the record books and photographs, each dog should have a tag that has the following information:

1. The letters "USDA"
2. The exhibitor's USDA license number
3. Numbers identifying the animal (sequentially)

To be corrected by: March 25, 1998

### ANIMAL INVENTORY

- 15 ASIAN ELEPHANTS
- 15 TIGERS
- 6 ALPACAS
- 1 NUBIAN GOAT
