## NARRATIVE

Current Inventory 27 Asian Elephants  
CATEGORY I: Non-compliant item(s) previously identified that have been corrected.  
Veterinary Care 2.40

A new Program of Veterinary Care has been completed.

CATEGORY III: Non-compliant item(s) identified this inspection  
Records 2.75

The TB test results of Jenny, which recently came from the Red unit on December 1, 1998, are not available for review. All records shall be readily available for review by any APHIS official.

To be corrected by: February 16, 1999

### NOTE:

Culture results on Vance indicated a positive TB status early January 1999. As of this date, no treatment has been instituted. This animal is owned by [b6]

There were large visible lesions on the rear legs of both Doc and Angelica. When questioned as to the cause of these lesions, it was stated by [b6] & Mr. Gary Jacobson that these scars were caused by rope burns, resulting from the separation process from the mothers on January 6, 1999. Angelica's lesion appeared as a pink linear scar, approx 6" long x 1" wide on the right rear leg. The left rear leg also had an scar directly below the cloth leg tie. Both lesions appeared to have been treated with an iodine-based ointment (they were moist). Angelica also had two linear healing scars on the back of the right hind leg. Doc had a pink scar on the right rear mid-leg area.

All these lesions now appear to be healing scars. After removal of the medicated ointment on 2/10, they appeared much less pink.

This issue is of concern, and will be forwarded to Headquarters for review to determine if it is a violation of the AWA (per instructions by Dr. Betty Goldentyer). A formal determination will be made at a later date and forwarded to the facility.
